1. Product Overview

1.1 Summary

Gymholik is a mobile-first, multi-tenant SaaS product that helps independent gym owners in India run daily operations from their phone: member records, membership plans and renewals, fee collection with receipts, attendance, expiry reminders, trainer assignment and a live owner dashboard. Each gym is a separate tenant. Gym owners pay Gymholik a monthly or yearly subscription.

1.2 Vision

Replace the paper register, WhatsApp groups and Excel sheets that most small and mid-size Indian gyms use today with one simple, fast, trustworthy app that an owner can learn in ten minutes.

1.3 Problem statement

Problem today	Impact on the gym owner
Fees tracked in a notebook or Excel	Missed dues, disputes with members, no clear monthly income figure
Expiry dates remembered by memory	Members lapse silently, revenue is lost, owner chases people manually
No attendance record	Cannot see who has stopped coming, cannot spot churn early
Trainers see everything, or nothing	Personal data of members is exposed; trainers cannot track their own clients properly
Existing apps are expensive, desktop-first or in English-heavy complex UIs	Owners abandon them; staff do not adopt them
Owner has no remote view	Owner must be physically present to know how the gym is doing

1.4 Target market

- **Primary:** single-location gyms in India with 50 to 500 members, owner-operated, Android-heavy.
- **Secondary:** small fitness studios (yoga, Zumba, CrossFit boxes) with a few trainers.
- **Later:** multi-branch gym chains (Phase 3, not in MVP).

1.5 Product principles

1. **Owner first.** Every decision is judged by whether it saves the owner time or money.
2. **Fast at the front desk.** Check-in and payment must take under 10 seconds.
3. **Privacy by default.** Member personal data is hidden from anyone who does not need it. This is enforced on the server, not only in the app.
4. **Never lose money data.** Payments are never deleted. Mistakes are fixed with reversal entries.
5. **Simple language.** Short, plain English labels. Hindi translation can be added later.
6. **Look premium.** The app should feel like a modern fitness product, not a spreadsheet.

2. Goals, Non-goals and Success Metrics

2.1 Business goals

- Launch an MVP and onboard 3 pilot gyms within 14 to 16 weeks of project start.
- Convert at least 50 percent of pilot gyms to a paid plan after the 14-day trial.
- Reach 25 paying gyms within 6 months of launch and 100 within 12 months.
- Keep monthly infrastructure cost per gym very low (target under ₹50 per gym per month on the starting hardware).

2.2 Product goals

- An owner can register, add plans and add the first member in under 5 minutes.
- A staff member can check a member in within 10 seconds (search and tap, or QR scan).
- An owner can see today's collection, active members, dues and expiring members on one screen.
- A trainer sees only the members assigned to them, with phone numbers masked.

2.3 Non-goals for the MVP

- No member-facing app (members do not log in). Planned for Phase 2.
- No online payment gateway for member fees (cash, UPI and card are recorded manually). Razorpay for Gymholik subscriptions is Phase 2.
- No automatic WhatsApp or SMS sending (a WhatsApp deep link opened by the owner is used). Automation is Phase 2.
- No biometric or face-recognition attendance.
- No multi-branch management, inventory, supplement sales or payroll.
- No diet and workout plan builder beyond simple trainer notes.
- No iOS store release in the MVP (iOS simulator is used for development; Android APK is the first release).

2.4 Success metrics (KPIs)

Metric	Definition	Target
Activation	Registered gyms that add at least 5 members within 7 days	70 percent
Weekly active gyms	Gyms with at least one check-in or payment in the last 7 days	80 percent of paying gyms
Trial to paid	Trial gyms that pay before trial or grace ends	50 percent in pilot
Check-in speed	Median time from opening Check-in to confirmation	Under 10 seconds
Crash-free sessions	Sessions without a crash	99 percent
API availability	Monthly uptime of the API	99 percent on home server, 99.5 percent after VPS move
Data safety	Successful daily backups and tested restores	100 percent backups, restore tested monthly
Support load	Support messages per active gym per month	Under 2

3. Users and Personas

Role	Who they are	Main goals	Pain points
SUPER_ADMIN	Gymholik founder / support	See all gyms, extend or suspend subscriptions, help owners	Needs safe tools without reading gym data casually
OWNER	Gym owner, 28 to 50 years, uses WhatsApp and UPI daily, moderate tech comfort	Know collection, dues and expiries; control staff and trainers; protect member data	Paper registers, chasing fees, staff mistakes, trainers leaving with client data
STAFF	Front-desk / receptionist	Add members, check in, collect payments quickly	Slow apps, long forms, queues at the desk
TRAINER	Personal, cardio, Zumba, yoga or general trainer	See their own clients, track workouts, diet and progress	No tool to record progress; no clarity on which members are theirs
MEMBER	Gym customer	Pay fees, get receipts, be reminded to renew	Forgets expiry dates. No app access in MVP, interacts via staff and WhatsApp

3.1 Primary persona: Rajesh, gym owner

Rajesh owns a 180-member gym in a tier-2 city. He uses an Android phone, pays suppliers by UPI, and keeps fees in a notebook. He wants to know at night how much money came in today and which members expire this week. He does not want to hire more staff just for record keeping. He worries that a trainer who leaves may take client phone numbers to a rival gym.

3.2 Secondary persona: Neha, trainer

Neha is a personal trainer with 12 clients. She wants a simple place to record each client's workout, diet and weight over time. She understands that the owner controls who she can see, and she does not need payments or phone numbers.

4. Business Model and Pricing

Gymholik is sold to gym owners as a subscription. Prices below are starting assumptions and can be changed in configuration without code changes.

Plan	Price (assumed)	Notes
Free trial	₹0 for 14 days	Starts at gym registration. No card needed. Full features.
Monthly	₹499 per month	Renewed manually in MVP (owner pays by UPI, super admin extends validity).
Yearly	₹4,999 per year	About two months free. Same features.
Grace period	5 days after expiry	App works normally with a renewal warning. After grace: access blocked, data kept safe.

4.1 Subscription rules

- The gym's **subscriptionValidTill** date is checked on every API request.
- After validity plus 5 days, requests return the error code `SUBSCRIPTION_EXPIRED`. Login, subscription info and renewal help stay available.
- Data is never deleted on expiry. When the owner renews, everything is available again.
- A suspended gym (by super admin) is blocked immediately with a clear message.
- Trainers do not create trials. They always join an existing gym.

4.2 Phase 2 monetisation ideas

- Razorpay auto-renewal for gym subscriptions.
- Per-member or per-branch pricing tiers.
- Paid add-ons: automatic WhatsApp reminders, member app, class scheduling.

5. Scope

Module	MVP (Phase 1)	Phase 2	Phase 3
Auth and tenancy	Register gym (owner), register trainer by gym code, login, refresh, lockout, change password	OTP login, forgot password by OTP	SSO for chains
Members	CRUD, photo, search, filters, soft delete, member code	Documents, health form, body measurements	Member self-service app
Plans and memberships	Gym plans, first membership, renewal	Freeze, upgrade, family and couple plans, offers	Packages across branches
Payments	Cash, UPI, card records, partial payments, receipts PDF, reversal	Razorpay links, GST invoice, expense tracking	Accounting export
Attendance	Manual and QR check-in, absent list, expired warning	Face or biometric, class attendance	Door integration
Reminders	Daily job, log, WhatsApp deep link from the app	WhatsApp Cloud API and SMS automation (DLT)	Smart campaigns
Trainers	Approval, trainer types, assignment, masked data, notes	Class batches and timetable, PT session counter, commission	Salary and payroll
Dashboard	Collection, active, expiring, new, dues, 7-day trend	Reports (monthly income, churn), exports	Multi-branch analytics
Platform	Super admin: list, extend, suspend gyms	Razorpay subscriptions, admin web panel	Partner programme

6. Functional Requirements

Requirement IDs are stable and are referenced by the TRD, test cases and the implementation plan. Priority: **M** = must have for MVP, **S** = should have, **C** = could have.

6.1 Authentication and onboarding (AUTH)

ID	Requirement	Pri	Acceptance criteria
AUTH-01	Owner registers a gym with gym name, own name, mobile number, password and confirm password. No city field.	M	Gym and OWNER user are created. 14-day trial starts. Owner is signed in automatically and lands on Home.
AUTH-02	Mobile number is globally unique and is the login ID.	M	Duplicate number shows the error under the mobile field. No second account is created.
AUTH-03	Registration screen has an "I am a..." selector: Gym Owner or Trainer. Default is Gym Owner.	M	Switching keeps already typed name, number and password.
AUTH-04	Trainer registers with gym code, name, mobile, password. No gym name, no trial. Button text is "Start".	M	Valid code shows "Joining: gym name". Invalid code shows "Invalid gym code".
AUTH-05	A new trainer account is PENDING_APPROVAL and cannot log in until the owner approves.	M	Login returns ACCOUNT_PENDING_APPROVAL. After approval login works. After rejection login returns ACCOUNT_REJECTED.
AUTH-06	Gym code is a unique 6 to 8 character code generated at registration. Owner can copy, share and regenerate it.	M	Code is unique, avoids look-alike characters, and a regenerated code makes the old one invalid.

ID	Requirement	Pri	Acceptance criteria
AUTH-07	Login with mobile and password only. No gym code on login.	M	Gym is resolved from the user record.
AUTH-08	Access token 30 minutes, refresh token 30 days with rotation.	M	Expired access token is refreshed silently. Reused refresh token is rejected.
AUTH-09	Account lock for 15 minutes after 5 wrong passwords. Rate limiting on login, register and gym-code lookup.	M	Locked user gets a clear message. Brute force from one IP is throttled.
AUTH-10	Change password for any logged-in user.	M	Old password required. All refresh tokens are invalidated.
AUTH-11	Forgot password: user is told to contact the gym owner. Owner can reset staff or trainer passwords.	S	Owner sets a temporary password; user must change it at next login.
AUTH-12	Session persists across app restarts using secure storage.	M	Tokens live only in the device secure store. Logout clears tokens and cache.

6.2 Plans (PLAN)

ID	Requirement	Pri	Acceptance criteria
PLAN-01	Owner creates, edits and deactivates membership plans: name, duration in days, price.	M	Deactivated plans cannot be chosen for new members but old memberships remain valid.
PLAN-02	Default plans are suggested at gym creation (Monthly 30, Quarterly 90, Half-yearly 180, Yearly 365).	S	Owner can edit prices before first member.
PLAN-03	Prices are stored in paise.	M	No floating-point money anywhere.

6.3 Member management (MEM)

ID	Requirement	Pri	Acceptance criteria
MEM-01	Add member: name, mobile, gender, date of birth (optional), address (optional), photo (camera or gallery), plan, start date, amount paid now (optional), payment mode.	M	Member, first membership and optional first payment are created together. Expiry equals start date plus plan days. Total, paid and due are shown live.
MEM-02	Unique mobile per gym. Unique auto-generated member code per gym.	M	Duplicate mobile shows an inline error. Member code is sequential and never reused.
MEM-03	Member list with search (name, mobile, member code), filter chips (All, Active, Expired, Due), pagination, pull to refresh.	M	Search is debounced. Lists load 20 at a time.
MEM-04	Member detail: plan, start and expiry date, days left, total, paid, due, attendance history (30 days), payment history, QR card.	M	Status badge: green active, amber expiring in 5 days or less, coral expired.
MEM-05	Edit member details.	M	Changes are audited. Phone change re-checks uniqueness.
MEM-06	Soft delete (set INACTIVE). Owner only.	M	History is kept. Member disappears from active lists.
MEM-07	Renewal: if the last membership has expired, start is today, otherwise start is the previous expiry date.	M	A new membership record is created; the old one is marked EXPIRED when past.
MEM-08	Photo upload is validated and compressed.	M	Only image types, size limit, sanitised filename, served only to signed-in users of the same gym.
MEM-09	Member QR card: modal with QR of member code, name and gym, shareable as an image.	S	Owner can send the image on WhatsApp.
MEM-10	WhatsApp and call shortcuts (Owner only, or Staff if the gym allows full numbers).	M	Hidden when the number is masked.

6.4 Payments and dues (PAY)

ID	Requirement	Pri	Acceptance criteria
PAY-01	Collect payment against a membership: amount, mode (Cash, UPI, Card), optional note. Partial payments allowed.	M	Amount must be above zero and not exceed the due. Membership paid and due and member due update immediately.
PAY-02	Gym-wise sequential receipt numbers (example G12-2026-000123).	M	Two simultaneous payments never share a number.
PAY-03	Receipt PDF with gym name, member, amount, mode, date and receipt number. Share via WhatsApp.	M	PDF downloads with authentication and opens in the share sheet.
PAY-04	Payments are never deleted. Owner can create a reversal entry with a mandatory reason.	M	Reversal is a negative entry linked to the original; dues are recalculated; audit log is written.
PAY-05	Payment history with date range (today, week, month, custom) and mode filter, plus totals by mode.	M	Totals match the list.
PAY-06	Dues list sorted by highest amount, with days since expiry, collect and reminder buttons.	M	Total pending is shown in the header.
PAY-07	Idempotency key on payment creation.	M	A double tap or network retry does not create two payments.
PAY-08	TRAINER cannot access any payment or dues data.	M	API returns 403; the app hides these screens.

6.5 Attendance (ATT)

ID	Requirement	Pri	Acceptance criteria
ATT-01	Manual check-in by searching name, mobile or member code and tapping.	M	Success banner, haptic feedback, auto-dismiss in 2 seconds.
ATT-02	QR check-in with continuous scanning mode.	S	Repeated scans of the same code within 2 seconds are ignored.
ATT-03	One check-in per member per day.	M	Second attempt shows "Already checked in today".
ATT-04	Expired membership at check-in shows a warning. Owner setting decides whether to block or allow.	M	Warning shows member, expiry date, due amount, and Renew action.
ATT-05	Today's list with date picker and count.	M	Newest first. Shows method (Manual or QR).
ATT-06	Absent members for 3, 7, 15 or 30 days, including members who never visited.	M	Shows last visit as "12 days ago" or "Never visited".
ATT-07	TRAINER sees attendance only for assigned members.	M	Other members return 404.

6.6 Reminders (REM)

ID	Requirement	Pri	Acceptance criteria
REM-01	A daily job at 9 AM finds memberships expiring in 3 days, 1 day and today.	M	Each (membership, type) is processed only once (unique reminder log).
REM-02	Notifications go through a NotificationService interface. MVP uses a logging sender.	M	Real WhatsApp or SMS providers can be plugged in without changing the job.
REM-03	Expiring Soon list in the app with a WhatsApp button using a prefilled message.	M	Button opens wa.me with the message. Hidden when the phone is masked.
REM-04	Owner can set reminder days before expiry in gym settings.	S	Default 3.

6.7 Dashboard (DASH)

ID	Requirement	Pri	Acceptance criteria
DASH-01	Home shows greeting with user name, gym name, today's collection, month total and 7-day bars.	M	Numbers animate count-up. Empty week shows a single caption "No collections yet this week".
DASH-02	Overview cards: Active Members, Check-ins Today, New This Month, Expiring in 5 Days, Total Outstanding.	M	Each card opens its list.
DASH-03	Quick actions: Add Member, Collect Fee, Dues, Scan QR.	M	Check-in is the raised centre tab, not a quick action.
DASH-04	Expiring soon list with days left and shortcuts.	M	Next 5 days.
DASH-05	First-time empty state with a 3-step setup checklist (create plans, add member, collect payment).	S	Disappears once all steps are done.
DASH-06	Money cards are hidden for STAFF. TRAINER has no dashboard money.	M	Server omits money fields for these roles.
DASH-07	Banner when the gym subscription ends within 7 days.	M	Shows days left and renewal instructions.

6.8 Staff (STF)

ID	Requirement	Pri	Acceptance criteria
STF-01	Owner creates, activates and deactivates front-desk staff accounts.	M	Staff role is STAFF and never TRAINER.
STF-02	Staff can add members, check in, collect payments. Staff cannot delete members, reverse payments, see reports or manage trainers.	M	Server returns 403 on forbidden actions.
STF-03	Staff phone numbers are masked by default. Owner can allow full numbers with a setting.	M	Setting is off by default and every change is audited.

6.9 Trainers (TRN)

ID	Requirement	Pri	Acceptance criteria
TRN-01	Owner sees pending trainer requests with a badge count and approves or rejects.	M	Approval requires choosing at least one trainer type.
TRN-02	Trainer types are defined by the owner (default: Personal, Cardio, Zumba, Yoga, CrossFit, General). Owner can add, rename and deactivate.	M	A trainer can have one or more types.
TRN-03	Only the owner assigns members to a trainer (single or bulk), with optional PT fee and session count. Owner can end or reassign.	M	A member can only have one ACTIVE assignment per trainer. Audit log written.
TRN-04	A new approved trainer sees zero members until members are assigned.	M	Empty state: "No members assigned yet."
TRN-05	Trainer sees only ACTIVE assigned members. Requests for others return 404, not 403.	M	List, search, detail, attendance and notes all follow this rule.
TRN-06	Trainer sees masked phone (last 4 digits only), no address, no date of birth, no payments.	M	The full number never appears in any API response, log or QR result for trainers.
TRN-07	Trainer writes notes: workout, diet, progress (weight, measurements), general. Weight chart per member.	M	Notes only for currently assigned members. Owner can read all notes.
TRN-08	Deactivating a trainer ends all their assignments and alerts the owner to reassign.	M	Members without a trainer are listed with a Reassign action.

ID	Requirement	Pri	Acceptance criteria
TRN-09	Owner can view an audit log of assignments, approvals and setting changes.	M	Paginated, owner only.

6.10 Subscription and Super Admin (SUB)

ID	Requirement	Pri	Acceptance criteria
SUB-01	Subscription screen shows plan, valid-till date, days remaining and how to renew (UPI and WhatsApp support).	M	Visible to OWNER.
SUB-02	API blocks expired gyms after the grace period with SUBSCRIPTION_EXPIRED.	M	App redirects to the renewal screen.
SUB-03	Super admin lists all gyms with status and validity, extends by monthly or yearly plan, suspends and reactivates.	M	Extension adds time on top of the current validity when it is still in the future.
SUB-04	Gym settings: name, address, logo, allow expired check-in, reminder days, staff full phone toggle.	M	Owner only.

7. Roles and Permissions Matrix

Legend: **Y** full access, **M** masked data only, **A** assigned members only, **-** no access. Enforcement is on the server for every row.

Capability	SUPER_ADMIN	OWNER	STAFF	TRAINER
Register gym / manage subscription	Y (all gyms)	Y (own gym)	-	-
Manage staff accounts	-	Y	-	-
Approve trainers, set trainer types	-	Y	-	-
Assign members to trainers	-	Y	-	-
Manage plans and prices	-	Y	-	-
View member list	-	Y	Y (phone M)	A (phone M)
Full mobile number	-	Y	Only if owner enables	- (never)
Address and date of birth	-	Y	-	-
Add / edit member	-	Y	Y	-
Delete (soft) member	-	Y	-	-
Collect payment	-	Y	Y	-
View payment history and dues	-	Y	Limited	-
Reverse payment	-	Y	-	-
Check-in	-	Y	Y	A
Attendance reports and absent list	-	Y	Y	A
Dashboard money cards	-	Y	-	-
Trainer notes	-	Y (read all)	-	A (read, write)
Gym settings, audit log	-	Y	-	-
List all gyms, extend, suspend	Y	-	-	-

8. Non-functional Requirements

Area	Requirement
Performance	API responses under 300 ms at the 95th percentile for list and detail calls with 500 members per gym. Dashboard under 600 ms (cached 60 seconds).
Scalability	Home server supports 50 to 100 gyms. Design allows moving to a VPS in about one hour using Docker.
Availability	Target 99 percent on the home server (UPS recommended). Uptime monitoring with alerts.
Security	HTTPS only, BCrypt, JWT with short lifetime, rate limiting, strict tenant isolation, role checks on every endpoint, MongoDB not exposed to the internet, secrets in environment variables.
Privacy	Server-side masking by role. No personal data in logs. Privacy policy and consent text for members. Align with India's Digital Personal Data Protection Act, 2023 principles (purpose, minimisation, consent).
Data integrity	Money in paise as long. Atomic counters for receipts and member codes. Unique indexes to prevent duplicates. No hard deletes for members and payments.
Backups	Daily MongoDB dump, 14 days retention locally plus off-site copy. Restore tested monthly.
Usability	Plain English, 44 px minimum touch targets, labelled inputs, clear errors, works one-handed. Hindi localisation later.
Accessibility	WCAG AA contrast, reduce-motion support, scalable text.
Device support	Android 8 and above (priority), recent iPhones for development and later release. Works on low-end Android phones: animations must not drop frames.
Offline	Clear offline banner and disabled submit buttons. Full offline mode is Phase 2.
Maintainability	Layered architecture, DTOs, tests for services and tenant isolation, one source of truth per concern (tabs config, theme tokens, strings).

9. Key Business Rules

1. Expiry date = start date + plan duration in days.
2. Renewal start = today if the previous membership has expired, otherwise the previous expiry date.
3. Due amount = total - sum of payments (reversals reduce paid). Overpayment is rejected.
4. A member is **Active** if the latest membership expiry is today or later. **Expiring** if within 5 days. **Expired** otherwise.
5. Phone numbers are unique per gym for members and globally unique for users (login).
6. Receipt numbers are sequential per gym per year and never reused.
7. A trainer's visibility is defined only by ACTIVE assignments created by the owner of the same gym.
8. Unassigned or cross-gym resources return 404 to avoid revealing that they exist.
9. gymId always comes from the verified token, never from request bodies or URLs.
10. Expired subscription blocks access after 5 grace days but never deletes data.

10. Risks, Assumptions and Dependencies

10.1 Risks

Risk	Likelihood	Impact	Mitigation
Tenant data leak (one gym sees another)	Medium	Critical	gymId from JWT only, findByIdAndGymId everywhere, mandatory isolation integration tests, security review prompt after each module
Home server outage (power or internet)	High	High	UPS, uptime monitor, off-site backup, plan to move to VPS after 10 paying gyms

Risk	Likelihood	Impact	Mitigation
Data loss	Low	Critical	Daily backup, off-site copy, monthly restore test
Owners do not adopt the app	Medium	High	Test with real owners early, keep flows tiny, onboarding checklist, WhatsApp support
Trainer privacy leaks through screenshots or client caching	Medium	Medium	Server-side masking, no caching of member data to disk, privacy policy, audit log
Low-end Android performance	Medium	Medium	Limit blur and heavy animation, reduce-motion setting, test on a cheap phone
WhatsApp / SMS rules (templates, DLT)	High	Medium	Use wa.me links in MVP; automate in Phase 2
Background image or logo licence	Medium	Low	Use Unsplash or own photos, keep credits, replace brand-logo visible images
Scope creep	High	Medium	Strict MVP scope in this document, Phase 2 backlog

10.2 Assumptions

- Gym owners have Android smartphones and use WhatsApp and UPI.
- Members pay in person; the app only records payments.
- One gym equals one location in the MVP.
- Initial pricing is validated with 3 to 5 gym owners before launch.

10.3 Dependencies

- Domain name and Cloudflare account (free tier) for HTTPS tunnel.
- Google Play developer account (one-time fee) for Android release; Apple developer account later.
- Docker on the Fedora server; Docker Desktop on the development Mac for Testcontainers.
- Expo EAS for building the Android APK.

11. Release Plan

Release	Content	Audience
Alpha (internal)	Auth, members, plans, payments, attendance, dashboard on Mac and simulator	Founder
Beta (pilot)	Trainer module, reminders, subscription guard, backups, APK on real devices, deployed behind Cloudflare Tunnel	2 to 3 friendly gyms (free or discounted)
v1.0 (paid launch)	Pilot feedback fixed, pricing live, support process, privacy policy, Play Store listing	Gym owners in the founder's city first
v1.1 to v1.3	Automatic reminders (WhatsApp or SMS), Razorpay subscriptions, reports	All gyms
v2.0	Member app, class scheduling, multi-branch	Growth phase

12. Open Questions

1. Should front-desk staff be allowed to see full numbers by default? (Current decision: no, masked, owner can enable.)
2. Will personal training fees be tracked separately from gym membership fees in Phase 2?
3. Should the first release include Hindi labels?
4. Which WhatsApp provider will be used for automation, and who owns the DLT registration for SMS?
5. What is the final brand name, logo and domain? (Working name: Gymholik.)
6. Is GST invoicing required for the gym owners who are GST registered?

13. Glossary

Term	Meaning
Tenant	One gym and all its data. Isolated from every other gym.
gymId	Identifier of the tenant stored in every document and in the JWT.
Gym code	Short public code owners share with trainers so they can request to join.
Membership	One paid period of a member on a plan. Each renewal creates a new one.
Paise	One hundredth of a rupee. All money is stored as whole paise.
PT	Personal training.
Masking	Showing only part of a value (for example XXXXXX3210).
Soft delete	Marking a record inactive instead of removing it.
Reversal	A negative payment entry that cancels an earlier payment while keeping history.
